

## Bitpalast® Source Code Documentation

### Protect your investment!

The time has come to make changes to the software application you had developed with utmost care some time ago. However, your old programmer cannot be contacted, and the source code isn't commented. Cryptic lines, puzzling variables, mysterious scripts: no-one knows how your program works any more or how new functions can be added. Your programmer may also have concealed the fact that your program uses third-party components. Without these, your software cannot be run on any other system. Do you know which components you need? If not, your program may become obsolete with the next operating system update!

Software without source code comments or descriptions endangers your data security and threatens your investment.

Protect your investment with the Bitpalast® Source Code Documentation! Bitpalast® comprehensively comments the source code of your existing software. This enables you to understand easily how your source code functions. If necessary, you can also find out which additional components need to be installed on your computer for your program to function. We can provide you with a data model that shows the relationships between the various tables of your database. Interrelationships that cannot be demonstrated by means of comments in the source code are explained separately. The Bitpalast® Source Code Documentation enables you to understand your program. This helps you to protect your program from obsolescence and creates the foundation for making changes or enhancements to your software.

- ✓ Frees you from dependence on your former programmer & secures the survival of your software
- ✓ Improves data security and safeguards your investment
- ✓ Very low costs and complete cost transparency: you decide the budget and thus the scope of the documentation.
- ✓ Available in German or English for the same price
- ✓ Guaranteed quality due to IT developers with many years' experience & academic qualifications
