

Bitpalast® Source Code Sweeper

Restore order to chaos!

Your software has taken a long time to grow. And because things needed to move quickly sometimes, tidiness of source code may have occasionally fallen by the wayside. You are dragging obsolete components around like ballast. Quick and dirty solutions sprout like weeds from an impenetrable thicket of nested functions. Code sections are formatted differently and are not all indented logically to the same scheme. This means that each change and enhancement made to the source code costs you more time than necessary. Shakily programmed software is also more prone to hacker attacks.

The Bitpalast® Source Code Sweeper cleans up your software and makes it leaner and more secure. The source code is formatted to a uniform scheme, indented logically, and commented. Functions and procedures are arranged transparently. Quick and dirty solutions are identified and can be replaced by elegant, modern solutions if required. Hackers' access is restricted as the Bitpalast® Source Code Sweeper can identify and close security loopholes. If required, time-critical processes can be improved so that your software runs faster than before.

- ✓ Improve program stability & data security
- ✓ Very low costs and complete cost transparency: you decide the budget and thus the scope of the service.
- ✓ Guaranteed quality due to IT developers with many years' experience & academic qualifications
