

Bitpalast® "Keyword Search" web design module

In order for your users to find their way around your extensive website, you need the Bitpalast® "Keyword Search" web design module. That's a search engine exclusively for your website. Your visitors can use it to search for keywords in your site. The search results display a list of all pages that match the keyword you entered. Unlike an Internet search engine, your search results only contain pages from your own site.

One mouse click on the entry in the search results list takes you user to the appropriate page. The special thing about the Bitpalast® "Keyword Search" web design module isn't just the presence of a search form, but also the fact that users can search directly from the website menu. This saves the users detours.

The Bitpalast® "Keyword Search" module includes:

- ✓ Inclusion of an input line for the keyword search in the menu
- ✓ Integration of a search form
- ✓ Creation of a JavaScript™ program that enters keyword into the search form and begins the search
- ✓ Setup of the keyword search via Microsoft™ ExpressionWeb/FrontPage™ server extensions or ht://Dig
- ✓ Free technical support from personally designated Bitpalast® technicians

Illustration from the Bitpalast® website project "Business Mediation Center". Service also available in English.
