

Bitpalast® "Members' Area" web design module

Some data shouldn't be seen by just anybody. Sensitive information such as schedules, ratings and birthday lists, sales figures, or traders' prices should only be accessible to authorized users.

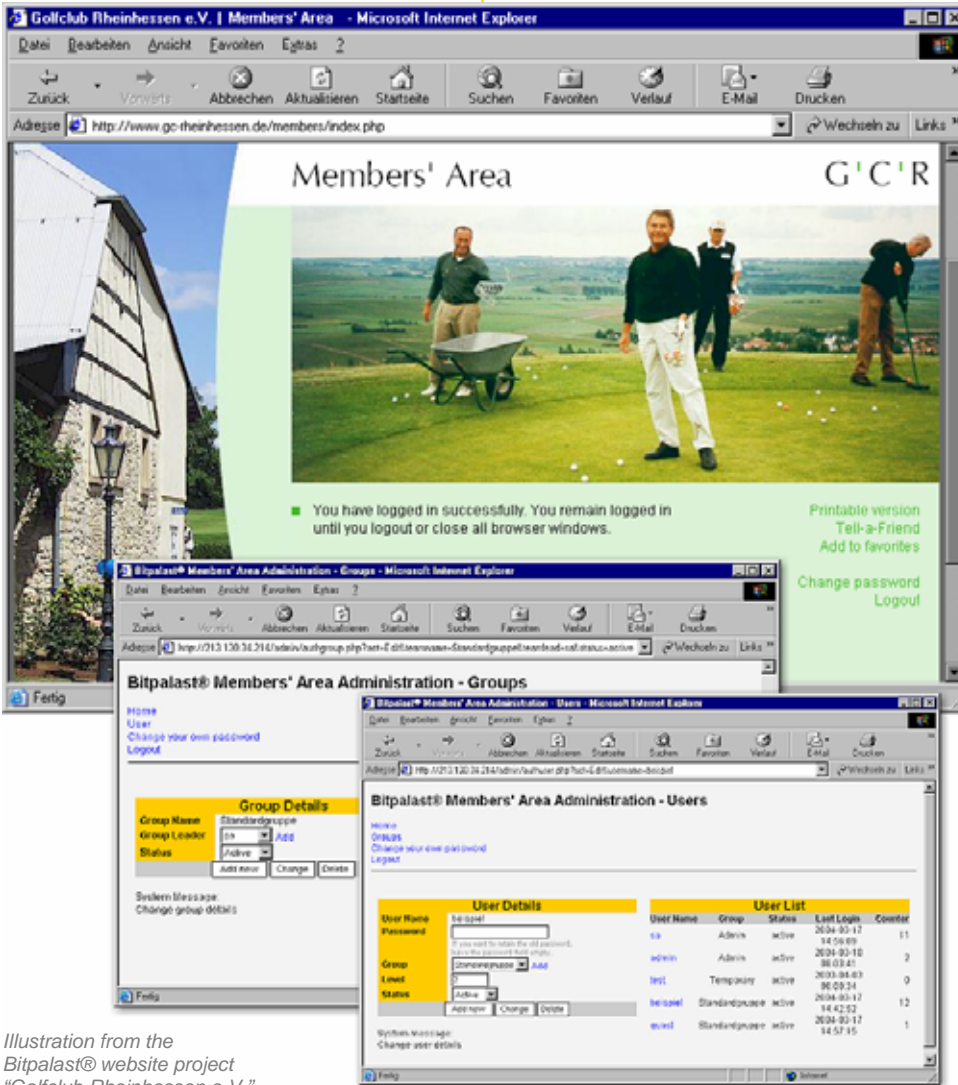

Illustration from the Bitpalast® website project "Golfclub Rheinhesen e.V."

The Bitpalast® "Members' Area" web design module enables you to control access to your website quickly, easily, and securely. You don't just decide which user is given access, you can even divide users into groups that can have differing authorization levels. This means you can restrict "top secret" information to a small circle, while less trustworthy users are only able to read more general pages.

The Bitpalast® "Members' Area" web design module includes:

- ✓ Bitpalast® user & password maintenance with the option of assigning users to groups and levels and restricting page access by group affiliation or access level. You can control these and other functions easily in your web browser. A sample group and user and the administrator account have already been set up for you.
- ✓ Staging of a MySQL™ database¹ for maintaining user data and deploying PHP¹ program pages for access control.
- ✓ Free-of-charge MySQL™ database for user data maintenance for the duration of your web operation at Bitpalast®.
- ✓ Design of a PHP¹ page for each of login, logout, login error, and password change, plus design of two sample pages in the members' area, and, if required, setup of an e-mail form for users to request access to the members' area and a server response page to this.
- ✓ Free technical support from personally designated Bitpalast® technicians

Offer good for businesses outside European Union only.

Bitpalast® "Members' Area" web design module	199.00 US \$
Bitpalast® technical support	free

Tax-free for non-EU residents & companies. Offer good for businesses outside European Union only.
