

Bitpalast® “Printer-Friendly Version” module

Internet pages are designed to fit the width of monitors. That means that they are often too wide to fit on a sheet of paper. On printing, part of the text is missing on the right hand side. And this may well be the precise piece of information that the visitor was looking for on your site. That would be annoying for the visitor and could even cause you to lose visitors to competitors.

The smart solution is the Bitpalast® "Printer-Friendly Version" web design module. This provides website visitors with a printer-friendly version of your range of products at the click of a mouse, and this version can be printed easily. As the printer-friendly version of a page is generated automatically by means of a program, pages that are added subsequently can also use this module.

The Bitpalast® "Printer-Friendly Version" web design module includes:

- ✓ Integration of a JavaScript™ encapsulated hyperlink such as "Printer-friendly version of this page" in all pages to call a JavaScript™ function
- ✓ Programming of a JavaScript™ function that opens a new browser window and launches a script that generates the printer-friendly version of the current page (for all HTML pages of your site)
- ✓ Deployment of a PHP program¹ and a PHP configuration file for generating special printer-friendly versions of your web pages, plus setup on a web server as required
- ✓ Insertion of start and end marks for the printable area in your pages' HTML source code
- ✓ Free technical support from personally designated Bitpalast® technicians

Illustration from the Bitpalast® website project "Abubakarr Kamara M.D." Service also available in English.

Offer good for businesses outside European Union only.
