

Bitpalast® Hosting gives you local access globally

Bitpalast®'s global NTT/VERIO IP data network only transports data, no speech. The lines aren't clogged up with phone calls, and web pages are delivered faster and more securely to your customers. In 2001, a test of the independent *Boardwatch* magazine confirmed the Bitpalast® NTT/VERIO IP data network to be the fastest data network under a full load. Plus you can extend the server uptime with Bitpalast® by means of a contractually binding guarantee to as much as 100%.

And what if it may still be that the fastest data network and the many interfaces with other networks don't meet your top-end requirements? Only a Bitpalast® web server working close to your customers' location can provide them with faster and more secure services. That's why you can achieve even higher speeds by deploying Bitpalast® Hosting wherever your customers are: in Europe, America, Asia, and Australia. Your web server can be operated in whichever of the more than 100 Bitpalast® NTT/VERIO data centers is located in your customer's region.

If your website receives a lot of international visitors, you can increase performance by using worldwide HTTP and streaming caching, guaranteed bandwidth, and worldwide balance loading. You can also benefit from the Bitpalast® MailFax service anywhere in the world.

Bitpalast® is your local partner, wherever you are in the world.
