

Bitpalast® Hosting takes on responsibility

All Bitpalast® Hosting products include comprehensive technical services. You can manage your web server yourself if you want, but you don't really need to. Just concentrate on using your website while Bitpalast® manages it for you. Bitpalast® has more than 15 years' expertise in computing and networking technology and is the partner of one of the financially strongest and most experienced companies for Internet services in the world, NTT/VERIO. At Bitpalast®, you are supported by personally designated Internet experts, and, if you require, receive in-depth reports about tasks that affect your Bitpalast® web server.

- ✓ To operate your website with Bitpalast® you don't need any technical services of your own, nor do you require IT expertise.
- ✓ Bitpalast® isn't just responsible for your web server, but also for running your site and your e-mail services. Bitpalast® can also produce and maintain your web design.
- ✓ The monthly Bitpalast® web operation fee contains all essential services, right up to web design maintenance. With Bitpalast® you can plan your investment securely.

Responsibility also means selecting responsible partners. Many competitors come and go. Bitpalast®, on the other hand, stands for reliability and longevity. Bitpalast®'s managers are experienced bankers and specialists in communication and technology. The strategic alliance with NTT/VERIO, our worldwide data center and IP partner, plus the best possible equipment from Sun™, IBM™, Cisco™, Network Appliance™, Nokia™ & Microsoft™, are the foundation for large-scale Internet success.

Bitpalast® is your ideal business partner.
